Kind of data

## Swedish National Data Service (SND)

- By contributing to the development of the ARIADNE portal,
- ... we found new ideas and technologies for the organisation of our local search portal

# Impacts and recognition

- New portal search engine based on the same techniques as ARIADNE's portal
  - Fully operative early 2017, incl. Elasticsearch, map search, periods,...
  - Better adapted to the scope, types and presentation of data archaeologists and historians are looking for
  - Increase in usefulness will bring more data, also for the ARIADNE portal
- We have also worked on the vocabularies used at SND, i.e. mapping to Arts & Architecture Thesaurus and PeriodO
- *“In 2014, we started collecting GIS data from excavations in several counties, and contacted SND in view of archiving the data with them. Since SND was an active partner of the ARIADNE project, it meant that our work received **all the benefits of being integrated into an extensive network of expertise**. That greatly contributed to the **success** of our project, in **ensuring consistency in workflow, metadata and data management**”* – Daniel Löwenborg, Department of Archaeology and Ancient History, Uppsala University
