

## Advanced Research Infrastructure for Archaeological Data Networking in Europe

### The Project

ARIADNEplus is the continuation of the successful ARIADNE project (2013-2017) for the integration of European archaeological repositories, which created a searchable catalogue of datasets including unpublished reports, images, maps, databases and other kinds of archaeological information accessible online.

### The Aim

The project does not aggregate or move data, but only the metadata of the datasets, which are maintained and controlled by their owners.

At present, about two million datasets have been catalogued, corresponding to a huge amount of information as each dataset may comprise, for example, an entire report with related images, drawings, or a complete database including thousands of individual records.

The catalogued content types range from individual finds to monuments and sites inventories and from the report of one single intervention to the results of a long-term archaeological mission.

ARIADNEplus will update existing data in the ARIADNE Portal, extend ARIADNE in geographic and temporal coverage, and in the range of topics addressed, now incorporating additional information about scientific analyses. It will also provide services to further process and re-use those data.

### The Catalogue

The ARIADNE catalogue is searchable according to the three facets of “when” (time), “where” (space), “what” (object) and keywords drawn from controlled vocabularies. Searching provides a list of the datasets corresponding to the selection criteria with summary information about their content and a link to the source data, which can thus be accessed by the user according to the rules established by the content owner.

### Partners

The 41 ARIADNEplus partners come from 23 European countries, plus 4 international partners.

ARIADNEplus is funded to support researchers; but we believe it may be important and useful also for heritage agencies and managers.

## Policies and strategies

The ARIADNEplus work plan includes a group of activities dedicated to documenting and proposing relevant policies and strategies for data such as the application of the FAIR principles and the certification of repositories. It will also address some fundamental issues, for example developing guidelines for the creation, management and sustainability of archaeological repositories.

There is a European crisis in physical repositories, and a pressing need for guidelines for physical archives, but it is equally important that digital archives are encompassed. Such documents may be of particular interest to heritage managers, policy makers and their agencies.

Moreover, our activity on policies and strategies includes provision for training for users, researchers and managers alike.

To facilitate serving the different communities targeted by these activities, it is planned that the support material, initially prepared in English, will be translated in various EU languages.

Such localization will also take into account local regulations and the diverse needs of stakeholders.

In general, the scope of the ARIADNEplus policies and strategies activities is not restricted to research: if there is a specific interest, they can include subjects more related to other remits, such as data for heritage management and site conservation.

## Technology

Although most of the technology employed in ARIADNEplus concerns the data integration goals of the project, including the creation of a searchable catalogue and the development of a Linked Open Data approach, a key role is played by the data services which the project will make available.

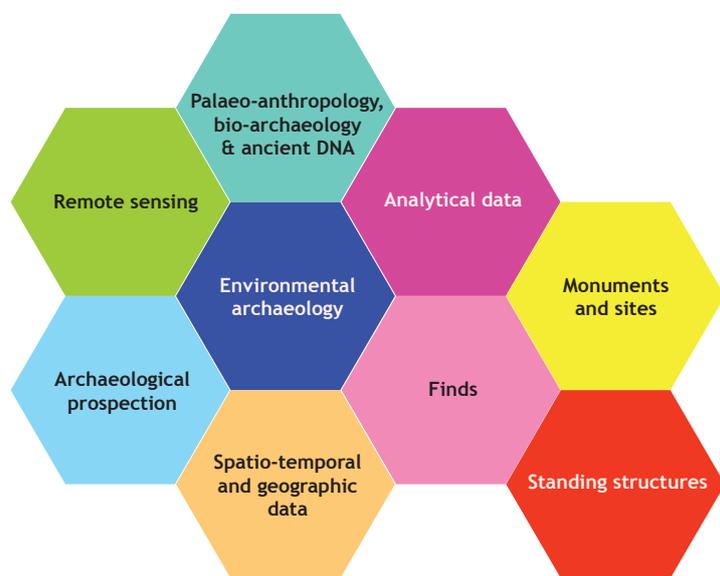

These range from tools for data analysis (e.g. for data mining and Natural Language Processing) and for data synthesis, (e.g. visualization of images and 3D, locating data on a map or in time, browsing the data using Linked Open Data, and so on).

We will also develop a number of pilot applications, to demonstrate service usage in exemplary cases. While unplanned additional services might probably be limited only to extensions of the planned ones, there is ample space for choosing pilot applications which match the needs of heritage managers.

## Contact us

ARIADNEplus is keen to get in touch with potential users and listen to their needs, addressing them within the project whenever possible.

Further information is available on the web site:  
[www.ariadne-infrastructure.eu](http://www.ariadne-infrastructure.eu)

## Networking and training

Consolidating a comprehensive, active and informed community is one of the goals of the ARIADNEplus project, which envisages a large number of initiatives, such as workshops, sessions at events, meetings and dedicated communication channels.

Particular attention will be dedicated to regions or countries where archaeological dataset creation, processing and management may be less advanced compared to the others: a working group on Central and Southern Europe has already been set up.

A similar approach will target groups defined according to their specific needs, for example museums, archaeological sites, and so on; the same will apply to different roles in cultural heritage and archaeology, such as site managers, museum curators, investigators and researchers, teachers, and communicators.

Many of the networking activities include a substantial training component, with the provision of training material both for direct participation, e.g. documentation and guidelines, and for remote participation, e.g. webinars.

The ARIADNEplus training plan also envisages specific training activities. These include tutorials and training workshops as well as knowledge transfer actions on individual projects, in which a small team is directly supported by ARIADNEplus experts.

You may contact the project coordinator Franco Niccolucci directly at:  
[coordinator@ariadne-infrastructure.eu](mailto:coordinator@ariadne-infrastructure.eu)

He will direct you to the most appropriate partner(s) in charge of the activity or activities that better correspond to your request.

Updated news are available from the web site and from our social accounts.
